Subject: FW: Acceptable Fill Criteria Language for Draft 401 Certification

Pete,

We talked briefly about this on Wednesday. Chung Yee and I would like to sit down with you this coming Monday (6-11-01) and talk (up to an hour -- maybe less) about the concern you expressed as outlined below. I believe a copy of your comments is included in one of the attachments.

I am tied up in the morning until after 10:30 but I have the rest of the day available.

Thanks,

Craig Thompson

Subject: FW: Acceptable Fill Criteria Language for Draft 401 Certification

DELIBERATIVE DOCUMENT CURRENTLY EXEMPT FROM PUBLIC DISCLOSURE

Chung Yee: I apologize for my oversight on the original distribution of this e-mail. The scope of work that I see remaining on providing acceptable fill criteria language for the drafting of a 401 Water Quality certification would include:

- 1) Review of the previous draft language on clean fill and determine its suitability for the draft 401 Certification
- 2) Response to comments and concerns raised by Pete Kmet on this language
- 3) Review and incorporation into acceptable fill criteria language for the 401 Certification the conditions set on fill quality and placement in the recent Biological Opinion issued by US Fish & Wildlife Service on the Sea-Tac Master Plan Improvements project.

I see your involvement primarily in items 1 & 2, essentially closing out on a project you were involved with during your tenure with NWRO Water Quality relying on your TCP technical expertise. I would anticipate that this effort would require at the most 16 hours of your time between now and the end of June. Your involvement ends when there is draft language for the 401 Certification on acceptable fill that is technically consistent with TCP policy and guidance and does not contradict or present a conflict with MTCA regulations.

Kevin Fitzpatrick
Section Manager
NWRO Water Quality Program
