

Ecology Inpa meeting w/ Eric & Ann

2-14-01

Stormwater plan - end of week may have final analysis from Kelly Whiting - Ecology will then review it. (water quality staff (not Kevin) (John Drysdale)

Kelly says they are a lot closer - we want to make sure

Vaca Farms

Farmed Wetland

don't look at ratios -

timing

after 1<sup>st</sup> certification effort met w/ Port & outlined their objectives

1:1 in basin } average  
2:1 out of basin } replacement

problem is enhancement vs. restoration  
prior converted designation - only when cropping  
Corps has chosen to interpret it as no longer  
wetland - from T.J. Stetz Corps.

Ecology regulates prior converted - on  
functional basis -

goal on ratios - in basin - is it  
the best package - not more but, is it done  
the best way -

(2)

509 overpass.

Ecology has originally requested restrictive covenants -

which would preclude 509

Port is avoiding Tye pond and not using it as mitigation status because need to have 509 go through it. from WSDOT

Tye KC instream regional facility

Eriks memo -

3.) cont condition 401 to have that as a requirement - but they are still looking to work that out in house.

4.) for Ann

5.) Implementation Addendum drawings - Eriks set is not the most recent

MSE review board - is S&W on the independent review board? is that a conflict

low flow study Ann to get ~~to~~ it done

(3)

need [ performance standard ~~to~~ post const.  
to [ monitoring protocol & contingency

try to get this from them now -

→ lag time for flow to replace the hydrology  
when it is initially constructed -

→ need sufficient monitoring criteria to track  
& know if we are in line -

6. overlay of wetland vs. stormwater plan -  
needed -

Kelly figured that they were short-  
footprints may have changed to accommodate  
extra storage - so more wetland impacts  
set up a meeting through Ann to meet  
w/ Kelly -

need to demonstrate that we have "reasonable  
assurance" that state H<sub>2</sub>O Qual. is maintained

Public comment closes Feb. 16 -

Port responds to comments

Para # 20 is the latest NRMP Stand alone  
or does it refer back to old docs.

21. performance Standards -  
are they measurable -  
performance standard - look at pre project  
& post project - need a baseline?  
have they done that

22. need site visit - Am to set up in next  
couple weeks

23.
