- new LFM proposal for Walker

(→ may) storage req. significantly
will affect smip design feasibility
may impact NRAM

- NEPL - manageable / OK

- SWater - liners - Walker & Miller & DM - understand effect on WL

⊗ Impacts - DM * impact is 1/3 of Creek in low flow period

no need to understand design feasibility & impacts to NRAM

- Concl 401 to re-size U & P to allow LFM req. > Hydr monitor for NRAM - possibly more mt -
1 for 1

AR 023796

- too much time spent on modeling
