Subject: RE: LowFlow/Resource Needs

Kevin,

Thank you for the input. I've been talking with the Port about charging some of the time being spent by Ed and HQ staff on the site specific study to the Interlocal Agreement we have with the Port. There is also the WQ compliance position that we envision to deal with Port 3rd Runway related issues.

It may also be possible to cost recover some of Rod's time to deal with Low Flow issues. We also have some flexibility to hire outside contractors to assist with our review. I've already mentioned the possibility of contracting with EPA to Ed for assistance with the Site Specific Study.

Perhaps we can set up a time in the near future to discuss in where we might be able to best utilize outside assistance for both our short-term and long-term needs.

Subject: RE: LowFlow

Ann: I will not be able to attend. Ann, Water Quality cannot afford to continue to give up this much "unsubsidized" staff time for this project. The only folks that we can possibly free up for continuing or new efforts are Ed Abbasi and a very small piece of John's time. I'll talk to Dave Garland and John about getting Rod Thompson involved in taking on some of the work that Dave used to do, but please don't take this as any sort of commitment of Rod's time to low flow analysis right now - we'll get back to you on that.

Be advised, Ann, that Dave Garland and I can longer involve ourselves in new or continuing efforts on low flow analysis by POS at Sea-Tac Airport. Our limited resources in Water Quality have been stretched past their breaking point by Sea-Tac and I'm reeling some of these resources back in to deploy them to the many other pressing priorities we have out of this section. For now, the primary points of contact for the section on Sea-Tac are Ed & John

Kevin

Subject: FW: LowFlow
Importance: High

Kevin, John, Dave, and Ed:

The Port will be coming here next Tues. am for a meeting to discuss Ecology's concerns regarding the revised Low Streamflow Report. John and Dave already participated in a meeting with Kelly Whiting and are aware of some of the issues concerning modeling and water quality.

The purpose of the meeting is to allow the Port's technical experts the opportunity to discuss some of the key issues with Ecology staff/Kelly and for the Port to explain how they arrived at the results presented in the revised Low Streamflow report.

Please let me know if any or all of you will be able to attend this meeting. Since part of the agenda involves water quality issues related to design of the low flow vaults, it is important that there be some representation from the Water Quality Program.

I believe that Ray is planning to attend at least part of the meeting. Please call me if you have any questions or concerns.

Thank you.

Subject: LowFlow

Ann, Kelly:

Attached is a suggested agenda for Tuesday's meeting. It's basically a list of suggested review/discussion topics intended to clarify the Port's understanding of the concerns related to the December Low Flow submittal. Confirmed attendees are me, Paul Fendt and Nick Stackelberg from PMX, Joe Brasher, and Felix Krisanovich. I think Pony is available, but he is out of the office until Monday, so he remains unconfirmed. Paul, can you forward this to Felix? I don't have an email address for him. Thanks.
